

Dear Miami Brain Tumor Coalition Supporters and Friends,

We at Miami Brain Tumor Coalition “MBTC” are a charitable organization dedicated to finding a cure for Brain Tumors and Brain Cancer “BT/BC”. MBTC is a non for profit organization and filed for our 501c3 to the Internal Revenue Service.

Miami Brain Tumor Coalition is a community-oriented, volunteer based group. 95% of our funds raised go directly for research. As we signed on January 9th 2013 our GRANT to Duke University Research (Duke letter attached)

This organization was founded by a small group of people who have directly experienced BT/BC in their lives. We believe that this gives us a unique perspective in the fight for a cure and gives us a strong platform to act as your advocate. At MBTC we believe that the only way to vanquish a monster as formidable as BT/BC is for all of us to work together.

MBTC was founded to help unite the labors of patients, friends, family, caregivers, foundations, doctors, researchers and companies into one cohesive effort. At MBTC our goals are simple: eradicate brain cancer and help those affected by it. We do this vital work by supporting cutting edge research; assisting patients, friends, and family find very much needed resources; working with hospitals and community organizations to increase awareness and education; and, through our advocacy program. It is our hope that you would unite with us in the fight to end brain cancer.

The Miami Brain Tumor Coalition is seeking corporate or individual sponsors. We ask that you “Join the Coalition.” Your sponsorship will directly go to fund our current grant “Bi-specific T-cell Engager”. “Glioblastoma is a lethal type of brain tumor with few treatment options. At the Preston Robert Tisch Brain Tumor Center at Duke University Medical Center , they have developed a novel approach that harnesses the body’s own immune system to combat this deadly cancer. One of our most exciting experimental therapies, the Bi-specific T-cell Engager (BiTE) has the ability to eradicate tumors, without risking damage to normal healthy tissue. I was put into it by Duke University Medical Center doctors and highly desire is that it can be used on ANYONE.

Following you will find different sponsorship levels. We at Miami Brain Tumor Coalition thank you for consideration and time. Please feel free to ask any questions regarding our annual sponsorship program.

Sincerely,

Tony Goitia
Chair / Founder
